

## Ice Business Environmental Policy

Ice Business and Ice-World International are the world's leading leasers of mobile ice rinks. Ice-World and its dealers are aware of their responsibility to burden the environment as little as possible. In this document, the measures taken and to be taken by Ice-World with regard to sustainable business are explained.

- **Windmills for all Ice Business ice rinks**

As from 1 November 2009, Ice Business has commissioned windmills to provide all the leased ice rinks around the world with green wind energy. Therefore, CO2 compensation is no longer required. In total, these windmills supply a capacity of 3 GWh. The windmills are set up in the Netherlands, and pictures will soon be up on our website. Certificate number 871687120000044244.

- **The Ice Business aluminium ice rink saves up to 40% in energy costs (TNO/TÜV)**

Years of experience prove that the Ice Business ice floors save a great deal of energy in comparison with traditional ice rinks made of EPDM or PE. In 2009, Ice Business gave the engineering firm Sparkling Projects the task of physically underpinning this energy saving. TNO/TÜV checked the calculation models and tested the various products in their laboratory. Both TNO and TÜV came to the conclusion that the Ice Business rink saved up to 40% in energy costs. Report nos: TNO034-APD-2009-0378. TÜV034-APD-2009-00378.

- **Ice Business is ISO 14001 environmentally certified**

The manufacture, rental, sale, assembly and disassembly of the mobile aluminium ice rinks are carried out in a sustainable manner. Aluminium and all other components are reused and the storage of the coolants is done in accordance with the regulations. ISO 14001 Certificate No.: 5932-2007-AE-NLD-RvA.

- **Ice Business uses environmentally friendly refrigerants.**

Ice Business uses the more expensive but environmentally friendly polypropylene glycol to cool its ice floors. Nearly 100% of this refrigerant is reused. Any leaked refrigerant is entirely biodegradable.

- **Ice Business 2010-2015 Sustainability Strategy**

Ice Business has set itself the following goals:

1. To cut in half the energy consumption of its ice rinks by 2015.
2. By 2015, Ice Business will only work with suppliers who comply with its policy on sustainability.
3. All materials necessary for the production of the ice rinks are recycled.
4. Certified timber originating from sustainably managed forests is used for the wooden boarding.
5. Compensation of CO2 emissions for the logistics process (transport).
6. Organising training courses for Ice Business dealers and its clients about the sustainable operation of ice rink projects.
